

BASIC SEWER SYSTEM

Storm Sewer System - is everything outside of the house, downspouts, driveway drains and rear yard/surface drains. The storm line is trapped at the test tee.

Sanitary Sewer System - is every inlet inside of the house, sinks, toilets, tubs/showers, etc. The sanitary line is trapped at each fixture inside the house.

Traps - are devices designed to store a chamber of water which creates a vapor lock to stop the odor/gases from reentering the inlet.

Lateral - is the connecting line from the house to the main sewer located under the street.

Main - is the primary line located under the street where all laterals are emptied into to.
